## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Specification*

2. The abstract of the disclosure is objected to because it contains legal phraseology such as "means" (see lines 2-5). Correction is required. See MPEP § 608.01(b).

### *Claim Objections*

3. Claims 1-4 are objected to because of the following informalities:  
Re claim 1: Substitute "is adapted to provide" with -- provides -- (see line 1).  
Re claim 1: Substitute "should have" with -- include -- (see line 6).  
Re claim 1: Substitute "are adapted to change" with -- changes -- (see line 8).  
Re claim 1: Substitute "are, in addition, adapted to change" with -- , in addition, changes -- (see line 10).  
Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Yamaguchi (US 5,874,725).

Yamaguchi teaches a noncontact IC card, which serves as a data carrier as recited in claim 1, having a substrate means; and a communication resonant circuit connected to the substrate means and consisting of at least one communication coil 4a and of a capacitor configuration 6 which is connected to the at least one communication coil 4a in an electrically conductive manner, which the communication resonant circuit has a resonant frequency which include a nominal value, and which has changing means for changing the resonant frequency of the communication resonant circuit, which changing means changes the resonant frequency from an initial value to higher frequency values, characterized in that the changing means, in addition, changes the resonant frequency from the initial value to lower frequency values. (See figure 1; col. 8, lines 6-49; and col. 9, line 64 to col. 10, line 40)

***Allowable Subject Matter***

6. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record, taken alone or in combination, fail to teach or fairly suggest a data carrier having a communication resonant circuit which has changing means for changing the resonant frequency of the communication resonant circuit, the changing means are formed by a single trimming plate made of a metal, and the trimming plate is mechanically connected to the substrate means of the data carrier at a location which determines the resonant frequency of the communication resonant circuit.

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wuidart et al (US 6,547,149) discloses an electromagnetic transponder.
9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to April A. Nowlin whose telephone number is (703) 605-1219. The examiner can normally be reached on Monday - Friday from 6:30AM - 4:00PM.

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122.
